

Q1. List out 5 cloud service providers.

Compare 3: AWS, Azure, GCP. List out Services -

1. Compute Service
2. Storage Service
3. Monitoring Service
4. ML-Based Service
5. Security Service

Ans.

1. Amazon Web Services (AWS)

<https://aws.amazon.com/>

Pros:

- Cost optimization features
- High availability and good disaster recovery options
- Easy-to-use platform to connect, manage, and automate large operations
- Comprehensive range of cloud services across all three cloud service categories

Cons:

- Requires technical expertise to manage effectively
- Scaling is expensive compared to other tools
- Complex to navigate for new users and small businesses

2. Microsoft Azure

<https://azure.microsoft.com/en-gb/products/cloud-services/>

Pros:

- High availability and disaster recovery options
- Comprehensive range of cloud services and tools, focused on hybrid setups
- Strong support for hybrid cloud solutions

Cons:

- Integrating with non-Microsoft tools is harder than with other platforms
- Can be complex to navigate for new users

3. IBM Cloud

<https://www.ibm.com/solutions/cloud>

Pros:

- Flexible pricing options, including reserved instances for cost optimisation
- Offers a range of infrastructure, platform, and software as a service
- Highly secure cloud services with advanced security and compliance tools

Cons:

- Limited integrations compared to other cloud providers
- Security and compliance features may not be necessary for all organisations

4. Oracle Cloud

<https://www.oracle.com/cloud/>

Pros:

- High availability and disaster recovery options
- Flexible pricing options, including reserved instances for cost optimisation
- Focus on business-critical applications, including advanced database and analytics tools

Cons:

- Performance issues with large datasets
- Challenging user interface and documentation

5. Heroku

<https://www.heroku.com/>

Pros:

- High level of flexibility and agility, easy to test and iterate
- Support for multiple programming languages and frameworks
- Intuitive developer-targeted platform for building and deploying apps quickly and easily

Cons:

- Heavy usage is pricey
- May not be suitable for businesses that require fine-grained control over their app environment

Comparison between AWS, Azure, and GCP

	AWS	Azure	GCP
Compute Service	Amazon EC2	Azure Virtual Machines	Google Compute Engine
Storage Service	Amazon S3	Azure Blob Storage	Google Cloud Storage
Monitoring Services	Amazon CloudWatch	Azure Monitor	Google Cloud Operations Suite (formerly Stackdriver)
ML-Based Service	Amazon SageMaker	Azure Machine Learning	Google Vertex AI
Security Service	AWS Identity and Access Management (IAM)	Azure Active Directory (Azure AD)	Google Cloud Identity & Access Management (IAM)
